> *(100–5,000 employees),* ***PARTIAL*** *for global large enterprise until certifications and scale land.* ***POSITIONING: "Enterprise Project & Portfolio Control Tower." MOTION: coexistence-first***
>
> *— PMCT sits above Jira/ServiceNow/SAP/HR/Finance and replaces the spreadsheet/BI glue layer*
>
> *before it ever replaces a work tool.*

STRATEGIC FRAMING

PMCT is not analyzed here as another task-management tool. The commercial frame throughout:

```
Jira · ServiceNow · SAP · HR · Finance · Teams        (the project ecosystem — systems of
record) ↓ PM CONTROL TOWER                               (the aggregation, intelligence &
control layer) ↓ CEO · CFO · CTO · PMO                         (decisions)
```

- Work-management tools (Tier 1) are the layer **below** PMCT; enterprise PPM/SPM suites (Tier 2) are the **direct** competitive tier; the status quo PMCT actually replaces is the **glue layer** — spreadsheets + Power BI + manual PMO reporting + reconciliation.
- Individual features do not differentiate (Jira and ClickUp have absorbed planning, AI, automation and governance). The tested claim is the **combination**: portfolio prioritization + financial intelligence (ROI/NPV/IRR/payback/EVM) + resource capacity + governance + executive reporting + configurable enterprise control + integrations + self-hosted deployment.
- The buyer is senior (CEO/CFO/CIO/PMO Director): committee sales, security review, procurement.
- Pricing is value-based on the layer — never the cheapest seat.

PART 1 — EXECUTIVE BUSINESS PLAN

1.1 Company/Product Concept

PMCT is an enterprise Project, Program & Portfolio Management (PPM) control tower: a self-hostable platform that brings planning, execution, governance, financials, resources, reporting, automation, integrations and executive decision-making into one governed system — and aggregates the systems the organization already runs (Jira, ServiceNow, SAP, HR, Finance, Teams) into one decision surface for leadership.

- **Who it is for:** corporate PMOs, portfolio/program leadership, CFOs and CEOs of mid-market and enterprise organizations (100–5,000 employees first), especially in project-intensive and regulated industries.
- **What problem it solves:** leadership cannot see or steer the project portfolio in real time. Delivery truth lives in Jira; money lives in SAP/Excel; demand lives in ServiceNow; status is re-typed into PowerPoint. PMCT replaces that glue layer with computed, auditable, live intelligence: "leadership never needs to ask a project manager for status."
- **What existing tools fail to solve completely:** work tools stop at task level; PPM suites are expensive, slow to deploy and weak below the project line; BI dashboards are passive, manually refreshed and unaudited. No mainstream product combines portfolio optimization + financial intelligence + governance + executive reporting on top of the ecosystem, at mid-market price, with a self-hosted option.
- **Why organizations need it now:** tool sprawl + AI-sprinkled dashboards without governance have increased, not reduced, reporting burden; boards demand traceable numbers; DPDP/GDPR and data-residency pressure favors controllable deployment.

1.2 Business Vision

- **Vision:** every enterprise runs its portfolio from one truthful control tower.
- **Mission:** make executive project intelligence computed, auditable and immediate — not hand-made monthly.
- **Positioning:** "The Enterprise Project & Portfolio Control Tower — the layer above your project ecosystem."
- **Target market:** mid-market and enterprise organizations in IT services, banking/financial services, telecom, infrastructure/EPC, manufacturing, pharma, government-linked entities — starting with India and the Gulf (relationship-rich, price-sensitive-but-value-hungry, data-residency motivated), then US/EU mid-market via partners.
- **Business model:** tiered SaaS subscription (seat-based to ~500 users, hybrid platform+seat above), one-time implementation services, optional perpetual/on-prem licensing for regulated and sovereign buyers, annual maintenance.

- **Long-term opportunity:** the PPM software market is **$6.8–9.8B in 2026, growing 10–13% CAGR to $10.1–17.8B by 2030–31** [V: MarketsandMarkets 2026 report — $9.79B 2026 → $17.75B 2031; The Business Research Company — $6.81B 2026 → $10.13B 2030]. PMCT aims at the mid-market band that Tier-2 suites over-serve on price and Tier-1 tools under-serve on depth.

1.3 Elevator Pitches

30-second: "Jira tells you what tasks are open. SAP tells you what was spent. Nobody tells the CEO whether the portfolio is on track — until someone builds a slide deck. PM Control Tower is the layer above your project ecosystem: it aggregates Jira, ServiceNow, SAP, HR and Finance into one live, audited control tower with EVM, governance gates and board-ready reporting. Deployed in weeks, self-hostable, at a tenth of enterprise PPM cost."

60-second: adds — "Every number is computed from source data with an audit trail: CPI/SPI, critical path, budget vs committed vs forecast, P80 Monte Carlo, gate compliance. Executives get an exception-first tower; the PMO stops hand-building board packs. We don't replace Jira — we make it finally answer to the business."

2-minute corporate pitch: adds the wedge — "Enterprises already pay for the layer today, invisibly: PMO analysts, Power BI models, reconciliation spreadsheets — typically 2–5x the cost of the tools themselves. PMCT consolidates that spend into one governed product. We sell coexistence first: keep Jira, kill the glue. Land at $15–21/user, expand to platform licensing, with a self-hosted option no SaaS incumbent offers."

Investor pitch: adds — "PPM is a $9.8B market growing 12%+ with no mid-market winner. PMCT ships today (115 data models, 168 APIs, CPM/EVM/Monte-Carlo engines, 177 report templates, 27-connector catalog, SSO/SCIM/MFA). Year-1 base plan: $481k revenue, 35 customers, break-even inside Year 3 at ~$1M ARR with < $800k cumulative cash need."

PART 2 — PROBLEM PMCT SOLVES

The fragmentation problem. Large organizations run delivery through a patchwork: Jira (engineering), spreadsheets (plans), Smartsheet/Excel (portfolios), ServiceNow (demand/tickets), SAP (money), PowerPoint (status). Each layer re-types the same facts; each re-typing loses fidelity, freshness and trust.

The concrete pains (with business impact):

Pain	Typical impact [E unless cited]
Project fragmentation across tools	PMO spends days/month consolidating; versions conflict
Portfolio visibility gaps	Decisions made on stale, hand-built summaries
PMO governance by email	Gates passed without evidence; audit findings
Resource allocation blind spots	Over-allocation discovered after burnout/delay
Capacity planning absent	Hiring and commitments unquantified
Financial tracking outside delivery	Budget overrun surfaces after the money is spent
CAPEX/OPEX, ROI/NPV/IRR manual	Business cases built once, never tracked
EVM not computed	CPI/SPI reserved for government contractors; early-warning lost
RAID scattered	Risks escalate by luck, not by rule
Dependencies invisible	Cross-project collisions found at go-live
Manual executive/steering/board reporting	2–5 FTE-equivalents of assembly per month
Data duplication + multiple licenses	Duplicate tool spend; reconciliation errors
Disconnected Jira/ServiceNow/SAP/HR/Finance	No single truth; "whose number is right?"
Spreadsheet dependency	Unaudited, single-point-of-failure reporting

Quantified context:

- Large IT projects run **45% over budget and 7% over time while delivering 56% less value** than predicted (McKinsey–Oxford study of 5,400 projects; industry-cited, dated 2012 but still the canonical figure) [R].
- **~9–12% of every project dollar is wasted** through poor performance; only ~one-third of organizations report mostly/highly successful delivery outcomes (PMI Pulse of the Profession, industry-cited) [R].
- The **glue-layer cost is the hidden baseline**: for a 100-person delivery organization, PMO reporting effort, BI maintenance and reconciliation typically cost **$150k–350k/year** before any tool license [E — model in Parts 9/12].

The consequence: decision latency. Portfolio corrections that should take days take quarters, because the truth is assembled monthly by hand. PMCT's value proposition is measured in *decision speed* and *waste avoided*, not in task features.

PART 3 — PMCT PRODUCT SCOPE (CAPABILITY MAP)

Roles: **A = Aggregation · D = Decision · C = Control · R = Reporting** — the four functions of a control tower. (Shipped = v3.1.0; all items below are shipped unless marked *Roadmap*.)

Table 1 — PMCT Product Capability Map

#	Group	Capabilities (shipped v3.1.0)	Role
1	Portfolio Management [D]	Portfolio dashboard, hierarchy (portfolio→program→project), weighted strategic objectives, prioritization scoring + budget-constrained optimizer, investment & business cases (ROI/NPV/IRR/payback, best/base/worst), benefits realization, scenario planning, portfolio health, executive portfolio dashboard, portfolio financials (Budget/Committed/Actual/Forecast)	D
2	Project Management [D/C]	Project register & 13-tab workspace, charter/plan, WBS tree, tasks (unlimited nesting), milestones, dependencies (FS/SS/FF/SF+lag), **CPM engine** (ES/EF/LS/LF, float, critical path), enterprise Gantt v2.7 (split panel, dependency arrows, zoom, drag), versioned baselines, schedule variance, project health (RAG+GREY)	D
3	PMO Governance [C]	Governance rules engine (thresholds → alerts → inbox → health recalc), stage gates with evidence + UAT hard-lock, approvals, RAID (risks/issues/assumptions/actions), decisions register, change requests with impact, audit trail on every mutation, intake forms	C
4	Resource Management [D/C]	Resource register, assignments, capacity + demand, workload heatmap, utilization, over-allocation flags, timesheets (submit→approve→lock with actuals cascade)	C
5	Financial Management [C]	Budget lines (CAPEX/OPEX), actuals from timesheets, forecast (SPI-extrapolated, labeled), EVM engine (PV/EV/AC → CPI/SPI/EAC/ETC/VAC/TCPI + history), S-Curves, committed-cost roll-up (*Roadmap: PO/contract depth*), client invoicing & expenses	C
6	Reporting & Analytics [R]	**Executive/Leadership Control Tower** (exception-first feed, traceable insights, 16-check nothing-missed validation, 30/60/90 outlook), persona dashboards (CEO/CFO/CTO/PMO/PM), **177 report templates**, board packs, scheduled reports, email subscriptions, What-Changed deltas, analytics, **universal PowerPoint export (42 views)**	R
7	Automation [C]	Automation rules (trigger/condition/action + journal), governance alerts (risk/budget/schedule/overload/dependency), escalations, scheduled board packs, webhooks	C
8	AI [D/R]	AI PM assistant (draft-first, human-approved), AI gateway & connector registry, AI-drafted steering packs, statistical anomaly detection (>2σ, no fake AI), seeded Monte Carlo P80 forecasting, say/do calibration, AI memory/learning (*Roadmap: generative status narratives, meeting assistant*)	D
9	**The Integrity Layer** [C/R — the moat]	Data freshness engine (honest staleness, GREY honesty), **SHA-256 tamper-evident evidence bundles**, 43-permission RBAC × 8 roles, SSO (SAML/OIDC) + SCIM + MFA, full audit trail, portfolio integrity score, data-quality score, 27-connector integration catalog with CONFIGURED→CONNECTED honesty, metadata-driven admin configuration (custom fields/types, naming conventions, terminology, feature flags), self-hosted single-tenant deployment	C

Command Center modules (shipped v3.0+): agile sprints/epics/story points, Kanban/Calendar/Workload views, product feedback + roadmap, docs workspace + message boards, client invoicing and expenses, construction field ops (RFIs, daily logs, punch list, BIM embed), deliverable proofing rounds.

PART 4 — TARGET CUSTOMERS

ICP ladder (primary → exploratory):

Segment	Size	Fit	Why
Mid-Market	50–500 employees, 20–200 project staff	**Primary**	Tier-2 PPM too expensive/slow; Tier-1 tools too shallow; glue layer most painful per dollar
Enterprise (upper-mid)	500–5,000 employees	**Primary**	Governance + financial intelligence + integrations matter; self-hosted/data-residency resonates; sells against one ServiceNow/Planview seat block
Large Enterprise	5,000+	Later (Y2+)	Needs certifications, scale proofs (E-1/E-2 exceptions), partner delivery
Small Business	10–50	Opportunistic	Starter tier; self-serve only; not the core motion

Industry shortlist (strongest first): IT Services & Consulting (portfolio visibility + client billing shipped), Banking/FS & Insurance (governance, audit, data residency), Telecom (capex programs), Infrastructure/EPC & Construction (field ops + proofing shipped), Manufacturing & Automotive (NPI programs), Pharma (gated R&D-like governance), Government-linked (sovereign deployment), Energy & Utilities (capex portfolio). Buying decision maker: PMO Director/CIO (mid-market), CIO/CFO/Transformation Office (enterprise). Sales cycle: 4–10 weeks (mid-market, remote) / 3–9 months (enterprise).

PART 5 — BUYER PERSONAS (condensed)

Persona	Core problem	PMCT value	Buying role	Killer objection → answer
CEO	No live portfolio truth; surprises late	Exception-first tower, 30/60/90 outlook, board pack in one click	Economic buyer	"Another dashboard?" → *it's computed + audited, not re-typed*
CFO	Budget vs actual vs forecast disconnected from delivery	Budget/Committed/Actual/Forecast, EVM, business-case ROI/NPV/IRR tracking, invoice/expense module	Economic buyer	"ERP does finance" → *ERP records spend; PMCT predicts completion cost*
CIO/IT Director	Tool sprawl; security review burden	SSO/SCIM/MFA, audit trail, self-hosted option, 27-connector catalog	Evaluator/approver	"Integration burden" → *JWT+webhooks, governed import, metadata config*
PMO Director	Manual reporting treadmill; weak governance adoption	Governance engine, gates with UAT lock, 177 templates, integrity score	**Champion**	"Team won't adopt" → *team keeps Jira; PMO gets truth without policing*
Portfolio Manager	Prioritization is political, not analytic	Weighted scoring, budget-constrained optimizer, scenarios	Champion	"Scores are subjective" → *transparent criteria, computed alignment %*
Program/Project Manager	Status reporting overhead	Auto-rolled health, What-Changed, PPT export	User/beneficiary	"Surveillance tool?" → *it removes their reporting work*
Resource Manager	Invisible over-allocation	Capacity, heatmap, utilization, timesheet cascade	User	—
Finance Manager	Manual cost joins	Budget lines, CAPEX/OPEX, invoices/expenses	User/approver	—
CTO	Tech estate opaque	Technology tower (apps, tech, debt, releases)	Evaluator	—
Auditor	Evidence gaps	Evidence bundles (SHA-256), audit trail, read-only role	Influencer	—

The "we already have Jira/ServiceNow" objection — strongest counters: (1) Jira answers "what is the team doing?", never "is the portfolio worth it and will it land on budget" — Atlassian's own portfolio answer is Jira Align/Enterprise at a **$166k+/year floor** [V]; (2) ServiceNow SPM costs **~$100–200+/user/mo estimated** with 6–12-month implementations [R]; (3) the PMO glue layer today costs more than PMCT's total price while producing unaudited numbers; (4) PMCT ships **coexistence** — connectors, webhooks, governed import — so the question is not rip-and-replace.

PART 6 — COMPETITIVE LANDSCAPE (TIERED)

Table 2 — 20-Competitor Comparison (tiered)

#	Tool	Tier	Primary purpose	Target customer	Portfolio depth	Financial depth	Governance	Acts as cross-ecosystem layer?	Pricing model
1	**Jira**	1	Dev work tracking	Dev teams→enterprise	Low (Align = separate $$$)	Minimal	Via Atlassian Guard/Enterprise	No (its own data)	Per-user [V]
2	**ClickUp**	1	All-in-one work	SMB→MM	Basic dashboards	Time/billing only	Basic	No	Per-user + AI add-on [V]
3	**Trello**	1	Boards	SMB	No	No	No	No	Per-user [V]
4	**Asana**	1	Work management	MM	Portfolios (Advanced)	Goals; no EVM	Forms/approvals basic	No	Per-user [V]
5	**Monday.com**	1	Work OS	SMB→MM	Dashboards	Budget columns	Basic automations	Partial (many integrations, same data)	Per-seat [V]
6	**Smartsheet**	3	Grid work management	MM	Portfolio roll-ups	Basic	Basic	Partial	Per-member [V]
7	**Wrike**	3	PM + marketing ops	MM	Folders/dashboards	Budgeted time	Approvals	Partial	Per-user [V]
8	**Planview**	2	Enterprise PPM/SPM	Large ent	**Deep**	**Deep** (Portfolios)	Deep	Partial (AdaptiveWork+Portfolios, mainly own suite)	Custom [R]
9	**Broadcom Clarity**	2	Enterprise PPM	Large ent	Deep	Deep (cost plans)	Deep gates	Partial	Custom [R]
10	**ServiceNow SPM**	2	SPM on ServiceNow	Large ent	Deep	Roadmap/cost	Deep	Strong **within** ServiceNow estate	Custom [R]
11	**Microsoft Planner/Project**	3	Familiar PM	MS shops	P5 portfolio basic	Cost fields	Basic	Partial (M365)	Per-user [V]
12	**Oracle Primavera**	2	EPC/schedule PPM	EPC/infra	Schedule-centric	Cost-loaded schedules	Gates	No	Custom [R]
13	**Aha! Roadmaps**	3	Product roadmaps	Product orgs	Roadmap only	No	No	No	Per-user [V]
14	**Teamwork**	1	Agency PM	Agencies	Basic	Billing/time	Basic	No	Per-user [V]
15	**Zoho Projects**	1	Budget PM	SMB	Basic	Invoices	Basic	No	Per-user [V]
16	**Basecamp**	1	Simple collaboration	SMB	No	No	No	No	Flat/per-user [V]
17	**Notion**	1	Docs+wikis	SMB→MM	Manual	No	No	No	Per-member [V]
18	**Airtable**	1	No-code bases	SMB→MM	DIY	DIY	DIY	No	Per-seat [V]

#	Tool	Tier	Primary purpose	Target customer	Portfolio depth	Financial depth	Governance	Acts as cross-ecosystem layer?	Pricing model
19	**Celoxis**	3	Mid-market PPM	MM	Good	Good (financials)	Moderate	Partial	Per-user + on-prem [V]
20	**PPM Express / Triskell / Sciforma**	2/3	PPM overlays/suites	MM→Ent	Good	Moderate	Moderate	Partial (overlay on MS/ADO/Jira)	Custom/per-user [R]
21	**PMCT**	**Layer**	**Portfolio control tower above the ecosystem**	MM→Ent	**Deep + optimizer + scenarios**	**Deep (EVM, NPV/IRR, CAPEX/OPEX)**	**Deep + UAT hard-lock + evidence bundles**	**Yes — designed as the layer**	Per-user → platform, self-hosted option

Tier rules applied in Parts 7/8: vs Tier 1 → coexistence/above analysis; vs Tier 2 → capability-for-capability + TCO; vs Tier 3 → both.

PART 7 — FEATURE COMPARISON MATRIX (TOP 12)

Table 3 — Feature-by-Feature Matrix (Y = native, P = partial/add-on/enterprise-tier, N = no, C = custom/quote; PMCT column = shipped v3.1.0)

Capability	PMCT	Jira	ClickUp	Asana	Monday	Smartsheet	Wrike	MS Proj/Planner	Aha!	Celoxis	ServiceNow SPM	Planview
Project mgmt (WBS/tasks/deps)	Y	Y	Y	P	P	P	Y	Y	P	Y	Y	Y
Portfolio mgmt & hierarchy	Y	P (Align $)	N	P	P	P	P	P (P5)	P	Y	Y	Y
Prioritization optimizer (budget-constrained)	Y	N	N	N	N	N	N	N	N	P	P	Y
Business case ROI/NPV/IRR/payback	Y	N	N	N	N	N	N	N	N	P	P	Y
CAPEX/OPEX classification	Y	N	N	N	N	N	N	P	N	P	Y	Y
EVM (CPI/SPI/EAC/TCPI)	Y	N	N	N	N	N	N	N	N	P	P	Y
CPM critical path	Y	P	N	N	N	P	P	Y	N	Y	P	Y
Gantt (enterprise, deps, baselines)	Y	P	P	P	P	P	P	Y	P	Y	Y	Y
Resource capacity & heatmap	Y	P	P	P	P	P	P	P	N	Y	Y	Y
Timesheets w/ actuals cascade	Y	P	P	N	P	P	Y	P	N	Y	Y	Y
RAID + decisions + change mgmt	Y	P	P	P	P	P	P	P	N	P	Y	Y
Stage gates + evidence	Y	N	N	P	N	P	P	N	N	P	Y	Y
Governance rules engine (auto alerts)	Y	P	P	P	Y	P	P	N	N	P	Y	Y
Executive exception-first tower	Y	N	P	P	P	P	P	N	N	P	P	P
Board packs / scheduled reports	Y	P	P	P	P	P	P	P	P	P	Y	Y
AI (in-price, draft-gated)	Y	P	P (add-on)	P	P (add-on)	P (add-on)	P (add-on)	P (M365 Copilot)	P	N	P (Now Assist $$)	P
Monte Carlo / P80 forecasting	Y	N	N	N	N	N	N	N	N	N	N	P
Evidence bundles (SHA-256, tamper-evident)	Y	N	N	N	N	N	N	N	N	N	N	N
Say/do calibration + anomaly detection	Y	N	N	N	N	N	N	N	N	N	N	N
Configurable metadata layer (fields/types/naming/terminology)	Y	P	P	P	P	P	P	P	P	P	Y	Y

Capability	PMCT	Jira	ClickUp	Asana	Monday	Smartsheet	Wrike	MS Proj/Planner	Aha!	Celoxis	ServiceNow SPM	Planview
Custom objects/entities	P (metadata)	P	P	P	P	P	P	P	N	P	Y	Y
Workflow automation + journal	Y	Y	Y	Y	Y	Y	Y	P	P	Y	Y	Y
Forms / intake	Y	Y	Y	Y	Y	Y	Y	P	P	P	Y	Y
Universal PowerPoint export	Y (42 views)	N	N	N	N	P	P	P	N	P	P	P
SSO SAML/OIDC	Y	P (Guard/Ent)	P (Ent)	P (Ent)	P (Ent)	P (Ent)	P (Ent)	Y (M365)	P (Ent+)	P	Y	Y
SCIM provisioning	Y	P (Ent)	P (Ent)	P (Ent)	P (Ent)	P (Ent)	P (Ent)	P	P	N	Y	Y
MFA (TOTP, per-user)	Y	P	P	P	P	P	P	P	P	P	Y	Y
Audit trail on every mutation	Y	P	P	P	P	P	P	P	P	P	Y	Y
Self-hosted / on-prem option	**Y (ships)**	N (Cloud/DC $$)	N	N	N	N	N	P (Server retired)	N	**Y**	N	P
Jira integration	Y (connector catalog)	—	Y	Y	Y	Y	Y	P	Y	Y	Y	Y
ServiceNow integration	Y	P	P	P	P	P	P	P	N	P	—	P
SAP / finance integration	P (connector catalog; live-credential flip)	N	N	N	P	N	N	P	N	P	Y (estate)	Y
API	Y (168 routes)	Y	Y	Y	Y	Y	Y	P	Y	Y	Y	Y
Mobile	P (responsive web)	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y	Y

Honest gaps for PMCT vs Tier 2: **Mobile native apps, scale certification, SaaS-only buyers' hosting preference, brand trust, ISV ecosystem.** These are roadmap/exception items (Part 29/33), not hidden.

PART 8 — PMCT DIFFERENTIATION (WITH LAYER TEST)

Applying the interrogation checklist + **layer test** ("does it operate across third-party systems of record, or only within its own data?") to the 10 areas:

#	Differentiation area	PMCT today	Best Tier-1 response	Best Tier-2 response	Layer test	Defensible?
1	Unified PMO control tower	One schema, 46 domains, one truth	Jira: fragments across products	Planview/Clarity: deep but siloed suites	Both operate mostly in their own data	**Yes**
2	Executive-first architecture	Leadership tower: exception-first, GREY honesty, traceable insights	Dashboards afterthought	Dashboards exist but per-suite	Executives still need per-tool logins	**Yes**
3	Financial intelligence	EVM + NPV/IRR/payback + CAPEX/OPEX + forecast, all computed	N	Planview deep, $$$	ERP ≠ delivery-predictive	**Yes**
4	Portfolio optimization	Weighted criteria + budget-constrained optimizer + scenarios	N	Y (Planview)	—	Partial — must prove parity
5	Resource intelligence	Capacity + heatmap + timesheet cascade	P	Y	—	Partial
6	Enterprise reporting	177 templates + board packs + PPT export (42 views)	P (add-ons)	Y	—	**Yes** (breadth + one-click)
7	Configurable enterprise control	Metadata layer: fields/types/naming/terminology, server-enforced	P	Y	—	Partial
8	Integration-first	27-connector catalog, webhooks, governed CSV import, Jira/ADO/ServiceNow sync with honest CONNECTED status	Y (within ecosystem)	Y	PMCT explicitly designed to sit above 3rd-party estates	**Yes — the core**
9	AI-driven PMO	Draft-first, human-gated, labeled classes; anomaly + Monte Carlo + calibration	Y (AI everywhere, auto-ish)	Y (Now Assist $$)	PMCT's AI is governed — differentiator in regulated buyers	**Yes** (governance angle)
10	**The aggregation layer itself + self-hosted**	Designed as the layer; self-hosted single-tenant ships today; evidence bundles	N	N (except partial estate plays)	**Only PMCT says yes to both**	**Yes — the thesis**

Verdict — Tier 1 (Jira/ClickUp/etc.): they will keep absorbing features, but their business model sells seats inside their own walls; none monetizes "truth across SAP+Jira+ServiceNow". PMCT does not compete for the same seat — it sells to a different budget (PMO/executive).

Verdict — Tier 2 (Planview/Clarity/ServiceNow SPM): capability parity is within reach (Part 3 map), at 20–40% of the per-user cost, deployed in weeks not quarters, with self-hosted option and evidence-chain auditability that none of them ship.

DIFFERENTIATION VERDICT: SUFFICIENT for mid-market and upper-mid enterprise (100–5,000 employees), driven by areas 1, 2, 3, 8, 10 (+ 6, 9); **PARTIAL** for global large enterprise until SOC 2/ISO 27001, native mobile, and 5,000+ user scale evidence exist (E-1/E-2/E-8).

Top 3 defensible differentiators: (1) the aggregation layer + self-hosted sovereignty; (2) financial intelligence computed from live delivery data (EVM/NPV/IRR) with tamper-evident evidence; (3) executive exception-first tower with honest GREY discipline.

PART 9 — "WHY PMCT?" VALUE PROPOSITION

Traditional organization (status quo stack), 100 project staff [E model]:

Cost element	Annual
Jira Premium (100 u)	$17,448
Smartsheet Business (100 u)	$22,800
Power BI Pro (30 analysts)	~$5,040
PMO analysts assembling status/board packs (2 FTE)	~$160,000
Reconciliation/admin of 4+ tools (0.5 FTE)	~$40,000
Misc. (PowerPoint effort, meetings to align numbers)	~$25,000
Status-quo glue total	**~$270,000/yr** — producing unaudited, stale numbers

PMCT (Business, 100 users): $25,200/yr + $30,000 one-time implementation + ~$5,000 self-hosted infra = **~$60,000 in year 1, $25–30k/yr thereafter** — producing computed, audited numbers.

Benefit model (all percentages are assumptions unless cited): reporting effort −70–90%; tool consolidation −2–4 licenses; decision latency weeks→same-day; overrun detection weeks earlier via EVM/CPI (value scales with portfolio size); audit/governance compliance by default. Even at **zero productivity benefit**, license + glue consolidation alone typically pays for PMCT 3–5x over at mid-market pricing [E].

PART 10 — CURRENT MARKET PRICING (2026, VERIFIED)

Table 4 — 2026 Pricing Comparison (per user/month; **A** = annual billing, **M** = monthly)

Tool	Free	Entry paid [A]	Mid [A]	Top published [A]	Enterprise	AI pricing	Source
Jira	≤10 users	Standard **$7.91** [V] (M: $9.05)	—	Premium **$14.54** [V] (M: $18.30)	Annual-only, **from ~$166k/yr** [V]	Included Premium+ (Atlassian Intelligence/Rovo)	atlassian.com; Tech.co 5/2026
ClickUp	5 users	Unlimited **$7** [V] (M: $10)	Business **$12** [V] (M: $19)	Business Plus / Enterprise custom	Custom	**Add-on $9–28/user** (Brain/Everything AI) [V]	clickup.com/pricing
Trello	Yes	Standard **$5** [V]	Premium **$10** [V]	Enterprise **$17.50** [V]	—	—	trello.com
Asana	≤10 users	Starter **$10.99** [V]	Advanced **$24.99** [V]	—	Custom (est. $35–45) [R]	AI Studio metered; Copilot-era add-ons [R]	asana.com
Monday.com	≤2 users	Basic **$9** [V]	Standard **$12** [V]	Pro **$19** [V] (min 3 seats)	Custom	AI add-on [R]	monday.com
Smartsheet	Trial	Pro **$9** [V]	—	Business **$19** [V]	Custom	Add-ons [R]	smartsheet.com; Tech.co
Wrike	≤5 users	Team **$10** [V]	—	Business **$25** [V]	Enterprise/Pinnacle/Apex custom [V]	Add-on [R]	wrike.com
Teamwork	Yes	Starter **$9.50** [V]	Pro/Deliver **$13.99–17** [R]	Grow **$25.99–33** [R]	Scale custom	—	teamwork.com
Zoho Projects	≤5 users/3 projects	Premium **$4** [V]	—	Enterprise **$9** [V]	—	—	zoho.com
Basecamp	Yes	—	—	**$15/user** or flat **$299/mo** unlimited [V]	—	—	basecamp.com
Notion	Yes	Plus **$10**	Business **$20** (AI included) [V]	—	Custom	Included Business [V]	notion.com
Airtable	Yes	Team **$20** [V]	—	Business **$45** [V]	Custom	Add-on credits [R]	airtable.com
MS Planner/Project	Planner in M365	Planner P1 **$10** [V]	Planner+Project P3 **$30** [V]	P5 **$55** [V]	—	M365 Copilot add-on $30 [R]	microsoft.com

Tool	Free	Entry paid [A]	Mid [A]	Top published [A]	Enterprise	AI pricing	Source
Aha! Roadmaps	No	—	Premium **$59** [V]	Enterprise **$99** / **E+ $149** [V]	—	AI add-ons [R]	aha.io
Celoxis	No	Cloud **~$22.50** [R] (from $10)	—	—	**On-prem ~$450/user one-time** [R]	—	celoxis.com; Capterra
Planview Portfolios	—	—	—	—	**Custom/quote** [V]; est. **$19–100+/user/mo**; AdaptiveWork est. $60–100 [R]	—	planview.com; TDPM; G2
ServiceNow SPM	—	—	—	—	**Custom/quote** [V]; est. **$100–200+/user/mo**; avg contract ~**$130k/yr** [R]	Now Assist add-on [R]	servicenow.com; Unthread 4/2026; Desk365
Broadcom Clarity	—	—	—	—	**Custom/quote** [V]; est. **~$60/user/mo**; ~$69k/yr baseline [R]	—	RFP.wiki; PPM Express
Oracle Primavera P6 EPPM	—	—	—	Cloud **~$125–145/user/mo** [R]	On-prem **~$2,750/user + $605/yr** [R]	—	Oracle price list (resellers); ProjectManager
PMCT (proposed)	≤5 users read-only	Starter **$9**	Professional **$15** / Business **$21**	Enterprise **$29** or platform	**Platform from ~$75k/yr**; perpetual from **$75k one-time** [E]	**Included in price** [E]	This plan, Part 14

Reading of the spectrum: **$4–10** entry work management → **$10–25** advanced work management → **$45–149** specialist (Airtable Business, Aha!) → **$60–200+ quote-only** enterprise PPM/SPM. The gap between $25 and $60 is exactly where a portfolio control tower for the mid-market belongs — and where PMCT prices (Part 14).

PART 11 — ORGANIZATION COST SIMULATION

Annual figures, USD, using Table 4 prices; implementation estimated as % of year-1 subscription (Tier-2 suites typically 50–150% — ServiceNow-class often ≥100%). Enterprise-tier tools marked with estimates use **planning ranges, clearly labeled [R]**. AI add-on costs included where the vendor charges them separately (ClickUp modeled with Brain $9/user).

Table 5 — 25-user organization (annual)

Tool	Plan	Subscription	Add-ons/AI	Implementation	Y1 TCO
Jira Standard	$7.91	$2,373	—	$356	$2,729
Jira Premium	$14.54	$4,362	—	$654	$5,016
ClickUp Business	$12	$3,600	$2,700	$360	$6,660
Trello Premium	$10	$3,000	—	$150	$3,150
Asana Advanced	$24.99	$7,497	—	$1,499	$8,996
Monday Pro	$19	$5,700	—	$1,140	$6,840
Smartsheet Business	$19	$5,700	—	$1,140	$6,840
Wrike Business	$25	$7,500	—	$1,500	$9,000
MS Planner+Project P3	$30	$9,000	—	$1,350	$10,350
Aha! Premium	$59	$17,700	—	$2,655	$20,355
Celoxis Cloud	$22.50	$6,750	—	$1,688	$8,438
Planview Portfolios	est. $60 [R]	~$18,000	—	~$13,500	~$31,500
ServiceNow SPM	est. $100 [R]	~$30,000	—	~$30,000	~$60,000
Clarity	est. $60 [R]	~$18,000	—	~$13,500	~$31,500
Primavera P6 EPPM	est. $125 [R]	~$37,500	—	~$28,125	~$65,625
PMCT Professional	**$15**	**$4,500**	included	**$7,500**	**$12,000**

Table 6 — 50-user organization (annual): same structure; headline rows — Jira Premium $8,724 / ClickUp $13,320 (incl. AI) / Asana $17,993 / Monday $13,680 / Smartsheet $13,680 / Wrike $18,000 / MS P3 $20,700 / Aha! $40,710 / Planview ~$63,000 / ServiceNow ~$120,000 / Clarity ~$63,000 / Primavera ~$131,250 / **PMCT Professional $9,000 + $7,500 = $16,500**.

Table 7 — 100-user organization (annual)

Tool	Subscription	Add-ons/AI	Implementation	Y1 TCO
Jira Standard	$9,492	—	$1,424	$10,916
Jira Premium	$17,448	—	$2,617	$20,065
ClickUp Business	$14,400	$10,800	$1,440	$26,640
Trello Premium	$12,000	—	$600	$12,600
Asana Advanced	$29,988	—	$5,998	$35,986
Monday Pro	$22,800	—	$4,560	$27,360
Smartsheet Business	$22,800	—	$4,560	$27,360
Wrike Business	$30,000	—	$6,000	$36,000
MS Planner+Project P3	$36,000	—	$5,400	$41,400

Tool	Subscription	Add-ons/AI	Implementation	Y1 TCO
Aha! Premium	$70,800	—	$10,620	$81,420
Celoxis Cloud	$27,000	—	$6,750	$33,750
Planview Portfolios [R]	~$72,000	—	~$54,000	~$126,000
ServiceNow SPM [R]	~$120,000	—	~$120,000	~$240,000
Clarity [R]	~$72,000	—	~$54,000	~$126,000
Primavera P6 EPPM [R]	~$150,000	—	~$112,500	~$262,500
PMCT Business	**$25,200**	included	**$30,000**	**$48,000**

Table 8 — 250-user organization (annual): Jira Premium $43,620 / ClickUp $66,600 (incl. AI) / Asana $89,964 / Monday $68,400 / Smartsheet $68,400 / Wrike $90,000 / MS P3 $103,500 / Aha! $203,550 / Celoxis $84,375 / Planview ~$315,000 / ServiceNow ~$600,000 / Clarity ~$315,000 / Primavera ~$656,250 / **PMCT Business $63,000 + $45,000 = $108,000**.

Table 9 — 500-user organization (annual): Jira Premium $87,240 (Enterprise tier typically required for SSO at this scale → **~$166k+ floor**) / ClickUp $133,200 / Asana $179,928 / Monday $136,800 / Smartsheet $136,800 / Wrike $180,000 / MS P3 $207,000 / Aha! $407,100 / Celoxis $168,750 / Planview ~$630,000 / ServiceNow ~$1,200,000 / Clarity ~$630,000 / Primavera ~$1,312,500 / **PMCT Enterprise $126,000 + $90,000 = $216,000**.

Table 10 — 1,000-user organization (annual): Jira Premium $174,480 (+Align/Enterprise for portfolio → custom) / ClickUp $266,400 / Asana $359,856 / Monday $273,600 / Smartsheet $273,600 / Wrike $360,000 / MS P3 $414,000 / Aha! $814,200 / Celoxis $337,500 / Planview ~$1,260,000 / ServiceNow ~$2,400,000 / Clarity ~$1,260,000 / Primavera ~$2,625,000 / **PMCT Enterprise $348,000 seat-based, or platform license ~$220,000 negotiated + $120,000 implementation**.

Table 11 — 5,000-user organization (annual): all Tier-1/3 tools scale to seven figures (Asana ~$1.8M, MS P3 ~$2.07M, ClickUp ~$1.33M incl. AI); Tier-2 quote-based planning ranges: Planview ~$6.3M, ServiceNow ~$12M (pre-discount; enterprise discounting typically 30–50% → realistic $4–7M), Clarity ~$6.3M, Primavera ~$13.1M. **PMCT Global platform license planning range $450k–700k/yr + implementation** — the self-hosted option makes this economics possible.

> *Every [R] row is a planning estimate, not a quote. The pattern, not the point estimates, is the finding:* ***Tier-2 PPM costs 5–15x PMCT at the same user count.***

PART 12 — TOTAL COST OF OWNERSHIP

TCO = Subscription + Implementation + Configuration + Integration + Training + Administration + **Reporting effort** + Data migration + Support + Add-ons + AI + Unused licenses.

Table — 100-user TCO comparison, 3-year horizon [E model]:

Cost line (3 yr)	Jira Premium + Smartsheet + Power BI + PMO effort (status quo stack)	ServiceNow SPM [R]	Planview Portfolios [R]	PMCT
Subscription	$18k + $68k + $15k = ~$101k	~$360k	~$216k	$75.6k (Y1 $25.2k + Y2–3)
Implementation/config	~$40k	~$250k+	~$180k	$30k
Integration build/maintenance	~$30k	~$60k	~$45k	$10k (connector catalog)
Training/admin	~$20k	~$40k	~$30k	$12k
PMO reporting effort (the glue)	**~$480k** (2 FTE × 3 yr)	~$120k	~$120k	**~$60k** (0.25 FTE)
Data reconciliation fixes	~$60k	~$30k	~$30k	~$5k
3-year TCO	**~$730k**	**~$860k**	**~$620k**	**~$193k**

Findings: (1) the status-quo stack is *not* the cheap option — reporting effort dominates; (2) Tier-2 suites lower the glue cost but carry 5–10x subscription; (3) PMCT wins the TCO comparison even against doing nothing, because it replaces effort, not just tools. PMCT's self-hosted option adds a customer-controlled infrastructure line (~$3–8k/yr) that SaaS-only competitors cannot offer at any price.

PART 13 — PMCT PRICING STRATEGY

Four models analyzed:

Model	Mechanics	Pros	Cons	Verdict
A — Per user	$X/user/mo	Simple; benchmark-familiar	Underprices executive value; punishes adoption that feeds the layer	Keep for ≤500 users
B — Org license	$X/mo up to N users	Predictable; rewards adoption	Caps expansion revenue	Retire
C — Enterprise platform	$X/yr unlimited users	Matches how Tier-2 is bought; high ACV	Requires sales-led motion	Adopt ≥500 users
D — **Hybrid (recommended)**	Platform fee + user bands above included block + role-based value metric	Monetizes the layer; protects contributor adoption	Explaining complexity	**Adopt**

Value-metric analysis: seats alone misprice an executive layer (10 executives + 500 contributors). Recommended value metric: **full-price "working" seats are contributors AND PMO/executive users alike** (simplicity), but the *plan ladder* is gated by value delivered (portfolio optimization, financial intelligence, governance, integrations, AI included), and above 500 users the platform fee captures organizational value while per-seat increments shrink. Read-only viewer licenses free or nominal — viewers spread the data that deepens switching costs.

PART 14 — RECOMMENDED PMCT PRICING

Positioning: **premium-to-work-management, value-to-enterprise-PPM.** Never the cheap option.

Table 12 — PMCT Recommended Pricing (USD; INR at ₹88)

	Starter	Professional	Business	Enterprise	Enterprise Plus
For	Small orgs (≤25 users)	Growing orgs (≤100)	Medium enterprises (≤500)	Large (≤2,000)	Strategic/global
Monthly (per user)	$11	$19	$26	$36	custom
Annual (per user/mo)	**$9** (₹792)	**$15** (₹1,320)	**$21** (₹1,848)	**$29** (₹2,552)	custom
Platform fee	—	—	—	optional $75k+/yr unlimited	$150k+/yr
Users	≤25	≤100	≤500	≤2,000	unlimited
Projects/portfolios	5 / 1	50 / 3	Unlimited	Unlimited	Unlimited
Core PPM (WBS/CPM/Gantt/EVM)	✓	✓	✓	✓	✓
Prioritization optimizer	—	✓	✓	✓	✓
Investment/business cases	—	✓	✓	✓	✓
Governance engine, gates, RAID	Basic	✓	✓	✓	✓
Integrity Layer (freshness, evidence bundles, Monte Carlo)	—	Read	✓	✓	✓
Reporting Center (177 templates) + PPT export	25 templates	✓	✓	✓	✓
AI assistant (draft-gated)	—	✓	✓	✓	✓
Automations, webhooks	—	✓	✓	✓	✓
Integrations catalog	3 connectors	10	All 27	All + custom	All + custom dev
SSO (SAML/OIDC)	—	✓	✓	✓	✓
SCIM + MFA enforcement	—	—	✓	✓	✓
Self-hosted deployment	—	—	✓	✓	✓ (+air-gapped)
Admin metadata center (custom fields/types/terminology)	—	✓	✓	✓	✓
Support	Community	Business hours	Business hours, 8×5	24×5, SLA 99.5%	24×7, SLA 99.9%, named CSM
API	✓	✓	✓	✓ + sandbox	✓ + rate-limit lift
Storage (self-hosted = customer-controlled)	5 GB	25 GB	100 GB	Custom	Custom

Annual-prepaid discount: 25% off monthly rates (built into the table). Design note: PMCT includes AI in the plan price (competitors charge $9–28/user add-ons [V]) and includes SSO at Professional (competitors gate it to Enterprise [V]) — two deliberate "included" anchors that reprice the comparison.

PART 15 — ONE-TIME LICENSE / PERPETUAL SALE

PMCT ships self-hosted today (Docker/bare-metal, single-tenant, one-file DB) — perpetual licensing is genuinely shippable. Includes: **binary/application license, private-cloud or on-prem deployment, dedicated database, 12 months of upgrades and support; source code only in Global/sovereign deals under escrow**; annual maintenance **18–20%** from year 2 (support + upgrade rights).

Table — Recommended perpetual pricing [E]

Edition	Scale	One-time license	Implementation	Maintenance (Y2+)
Small Enterprise	≤100 users	**$75,000** (₹66 L)	$7.5–30k	18% /yr
Mid Enterprise	≤500	**$150,000** (₹1.32 Cr)	$30–90k	18–20% /yr
Large Enterprise	≤2,000	**$300,000** (₹2.64 Cr)	$90–150k	20% /yr
Global Enterprise	2,000+ / sovereign	**$500,000–900,000**	$200k+	20% /yr

Anchor check: Celoxis on-prem ≈ $450/user one-time [V] → 500 users ≈ $225k; PMCT's mid-enterprise $150k undercuts the only published on-prem PPM benchmark while including governance/financial depth Celoxis lacks. Rationale: perpetual price ≈ 2.5–4x annual SaaS value at plan rates — attractive to cash-rich, cloud-averse buyers (governments, banks, DPDP/sovereignty-driven) without cannibalizing SaaS (maintenance ensures 90%+ of lifetime value still accrues).

PART 16 — ENTERPRISE DEAL EXAMPLES

Assumption: organization keeps Jira (coexistence) and kills Smartsheet/BI/status glue. Glue layer est.: $160k base + $900/user/yr [E]. PMCT plan: $21/user (≤500), $29 (>500).

Table 20 — Enterprise Deal Examples (annual, USD)

Users	Jira Premium	ClickUp	Asana Adv.	Monday Pro	Smartsheet	Status-quo glue [E]	PMCT	PMCT coexistence saving (vs Jira+glue)
100	$17,448	$14,400	$29,988	$22,800	$22,800	~$250,000	**$25,200**	**~$242,000 (−83%)**
250	$43,620	$36,000	$74,970	$57,000	$57,000	~$385,000	**$63,000**	**~$366,000 (−80%)**
500	$87,240	$72,000	$149,940	$114,000	$114,000	~$610,000	**$126,000**	**~$571,000 (−78%)**
1,000	$174,480	$144,000	$299,880	$228,000	$228,000	~$1,060,000	**$348,000**	**~$886,000 (−68%)**

Plus unquantified but real: reporting latency weeks→same-day; overruns detected via EVM weeks earlier; audit evidence automatic. In INR (₹88): the 250-user saving ≈ ₹3.2 crore/year.

PART 17 — PMCT REVENUE MODEL (PLANNING SCENARIOS — NOT FORECASTS)

Assumptions [E]: Y1 churn ≈ 0 (immature base); SMB/mid customers join at month start; blended price/user/mo — Conservative $12 (Starter/Professional mix), Base $15, Aggressive $19 (mix shifts up-market); avg users/customer — 35 / 60 / 90; one-time onboarding — $2,000 / $6,000 / $10,000 per SMB customer; enterprise platform deals listed separately in the tables. Label: **planning scenarios based on stated assumptions; no guarantee of customer acquisition**.

PART 18 — YEAR-1 REVENUE SIMULATION (12-MONTH TABLES)

Table 14 — Conservative (12 customers, SMB only)

Month	New	Total	Avg Users	Paid Users	Avg Rev/Cust	MRR	New ARR	Cum ARR	One-time	Monthly Rev	Cum Rev
1	1	1	35	35	$420	$420	$5,040	$5,040	$2,000	$2,420	$2,420
2	1	2	35	70	$420	$840	$5,040	$10,080	$2,000	$2,840	$5,260

12	4	56	90	6,460	$2,051	$114,840	$82,080	**$1,378,080**	$40,000	$154,840	**$1,371,940**

(Enterprise deals: M6 $120k ARR + $90k impl; M11 $150k ARR + $110k impl.)

Table 13 — SaaS Revenue Model summary (Year 1 exit)

Scenario	Customers	Paid users	Exit MRR	Exit ARR run-rate	One-time Y1	Total Y1 revenue
Conservative	12	420	$5,040	$60,480	$24,000	**$56,760**
Base	35	2,540	$38,600	$463,200	$287,000	**$481,200**
Aggressive	56	6,460	$114,840	$1,378,080	$500,000	**$1,371,940**

PART 19 — CUSTOMER SEGMENT REVENUE (steady-state illustrative mix [E])

Segment	Typical ACV	Customers (steady state)	ARR contribution
SMB (Starter/Professional)	$6,500	600	$3.9M
Mid-Market (Business)	$25,000	220	$5.5M
Enterprise (platform)	$100,000	28	$2.8M
Global Enterprise (Enterprise Plus)	$280,000	5	$1.4M
Blended	**ARPU $15,944/customer**	**853**	**$13.6M**

Blended ARPU ≈ $16k/customer confirms the platform-plus-seats architecture: the same 853-customer count at pure Starter pricing would yield ~$3.5M — the up-market ladder nearly quadruples ARPU.

PART 20 — ONE-TIME LICENSE REVENUE (alternative model [E])

5 enterprise perpetual customers in Year 1 (Mid ×2, Large ×2, Global ×1): license $150k+$150k+$300k+$300k+$600k = **$1.5M**; implementation (avg $90k ×5) = **$450k**; integration/training ~**$125k**; support (year 1 included) — total **~$2.08M Year-1 cash**; maintenance from Y2 (18–20% of license = **$270–300k/yr recurring**). Comparison: ~4.3x the Base-case SaaS year-1 revenue with 5 deals instead of 35 — but lower multiple on exit (Part 21).

PART 21 — SaaS vs PERPETUAL BUSINESS MODEL

Dimension	SaaS	Perpetual	PMCT read
Initial revenue	Low	**High**	Perpetual smooths Y1 cash
Recurring quality	**High (ARR multiple 4–8x)**	Maintenance only (18–20%)	SaaS compounds
Cash flow	Ramped	**Upfront**	Mix per deal
Scalability	**High**	Services-constrained	—
Enterprise procurement	Friction (security, vendor review)	**Familiar**	Perpetual unlocks sovereign/bank buyers
Valuation implication	**4–8x ARR + growth**	1–3x revenue	SaaS is the equity story
Predictability	**High (NRR)**	Re-buy cycles	—
Long-term revenue	Expansion + NRR	Maintenance ceiling	—

Recommendation: SaaS-led company with a **perpetual/sovereign lane** (target ≤20% of new bookings) for regulated/air-gapped/DPDP-driven buyers; hybrid deals (platform fee + implementation) are the enterprise bridge. Both models ship from the same codebase — no fork, no margin dilution.

PART 22 — UNIT ECONOMICS [E — assumptions stated]

Metric	Conservative	Base	Aggressive
Blended ACV (per customer/yr)	$5,040	$10,800	$20,520
Gross margin	85%	85%	85%
Annual churn (assumption)	10%	12%	15%
LTV (ACV×GM÷churn)	$42,840	$76,500	$116,280
CAC — founder-led/lean [E]	$2,200	$4,500	$7,000
CAC — fully-loaded with enterprise sales [E]	—	$15,000	$25,000
LTV:CAC (lean / loaded)	19.5 / —	**17.0 / 5.1**	16.6 / 4.7
CAC payback (loaded)	—	~10.5 mo	~8.7 mo
NRR assumption (expansion: users + tier ladder)	100%	105–115%	120%+

Honesty note: the lean-CAC ratios (16–19x) are a founder-led-sales artifact, not a steady state; the loaded view (≈5x) is the planning number. Both beat the SaaS viability bar (LTV:CAC ≥ 3, payback ≤ 18 months).

PART 23 — BREAK-EVEN ANALYSIS [E]

Operating cost assumptions (monthly, fully loaded): Conservative $38k (4 engineers, founder-led sales, minimal stack); Base $65k (7 engineering/PM, 2 sales/CS, marketing, cloud, AI API, legal/admin); Aggressive $110k (12 engineering, 4 sales/CS, partner program, security audits). Contribution margin per customer = ACV × 85%.

Table 19 — Break-Even

	Conservative	Base	Aggressive
Monthly burn	$38,000	$65,000	$110,000
Annual fixed cost	$456,000	$780,000	$1,320,000
Contribution margin/customer	$4,284	$9,180	$17,442
Break-even customers	**107**	**85**	**76**
Break-even ARR	**$539,280**	**$918,000**	**$1,559,520**
Year-1 exit ARR (from Part 18)	$60,480	$463,200	$1,378,080
Distance to break-even at Y1 exit	−89%	−50%	−12%

Read: Base reaches ~50% of break-even within Year 1; Aggressive is nearly break-even on an ARR basis by month 12 (helped by one-time services; EBITDA-positive Year 1 including services). Conservative requires either a cost reset or a deliberate shift up-market — the strategy conclusion (Part 36) follows directly.

PART 24 — 3-YEAR BUSINESS MODEL [E — planning assumptions, not forecasts]

Method: Y1 revenue = 12-month simulation (Part 18, incl. one-time services). Y2/Y3 = retained ARR (85% GRR) + new ARR added mid-year at half-weight + one-time services. Costs scale with hiring plan.

Table 18 — 3-Year Model

	Conservative	Base	Aggressive
Year 1 — customers / ARR / revenue / EBITDA	12 / $60k / $57k / **−$399k**	35 / $463k / $481k / **−$299k**	56 / $1,378k / $1,372k / **+$52k**
Year 2 — customers / ARR / revenue / EBITDA	30 / $151k / ~$133k / **−$507k**	85 / $1,033k / ~$1,044k / **−$206k**	145 / $2,313k / ~$2,970k / **+$1,020k**
Year 3 — customers / ARR / revenue / EBITDA	55 / $297k / ~$242k / **−$578k**	150 / $1,807k / ~$1,666k / **−$84k**	240 / $4,000k / ~$3,890k / **+$1,290k**
Cumulative cash requirement	**~$1.48M**	**~$0.59M**	**cash-positive from Y1**
Break-even point	Not reached in 3 yr	Early Year 4	Inside Year 1–2

PART 25 — MARKET POSITIONING

Option	Strength	Weakness	Verdict
"PMO Control Tower"	Familiar to PMO buyers	Narrow; sounds like a PMO tool, not a C-level platform	Good subtitle
"Enterprise Project Control Tower"	Clear, credible	"Project" undersells portfolio/financial depth	Acceptable
"The Control-Tower Layer Above the Project Ecosystem"	**Category-defining; explains coexistence; justifies premium; matches shipped integrations + integrity stack**	Needs integration proof on day one; educates the market	**Lead narrative**
"Project-to-Portfolio Intelligence Platform"	Accurate	Generic; blends into BI/analytics noise	Avoid
"Enterprise Delivery Intelligence Platform"	Modern	"Intelligence" is AI-washed everywhere in 2026	Avoid
"Unified Project, Portfolio & Resource Control Tower"	Complete	Long; feature-list energy	Tagline only

Recommendation: Position as **"PM Control Tower — the Enterprise Project & Portfolio Control Tower"**, with the layer narrative as the story told in the first five minutes of every meeting: *your tools keep their jobs; the truth gets a home*. This positioning is credible **because** PMCT ships the integration catalog, connector honesty discipline, and evidence bundles that the claim requires — and it prices like infrastructure, not like a seat.

PART 26 — SALES STRATEGY

- **Ideal customer:** 100–1,000 delivery staff, existing Jira/ADO estate, PMO + CFO pain, data-residency sensitivity a plus.
- **Economic buyer:** PMO Director (champion) → CIO/CFO (approvers). Team-lead buyers are the *users*, never the buyers — pricing and packaging must never optimize for them alone.
- **Sales process:** remote-first discovery → live demo on the prospect's own scenario data → **paid pilot** (4–8 weeks, fixed fee, success criteria: exception feed adopted, board pack generated, 2 connectors live) → security review → procurement → implementation → go-live → expansion (users → tiers → platform).
- **Cycle:** 4–10 weeks mid-market; 3–9 months enterprise. Negotiation anchors: multi-year prepay discount 10–15%; platform fee traded for 3-year commitment; perpetual only for sovereignty cases.
- **Contract structure:** annual subscription, auto-renew with 90-day notice; SLA from Enterprise tier; DPA + data-residency schedule standard.

PART 27 — GO-TO-MARKET STRATEGY

Priority order for a layer product sold to senior buyers:

1. **Direct founder-led sales** (Y1 core): outbound to PMO Directors; PMO-community content; live demo discipline. Channels: LinkedIn, PMI/IPMA chapters, webinars with the Integrity Layer as the hook ("board numbers you can prove").
2. **Consulting partners / SIs** (Y2 accelerator): Big-4-adjacent PMO consultancies and regional ERP integrators (Gulf/India) earn implementation revenue; 15–20% referral fees.
3. **Cloud marketplaces** (Y2+): AWS/Azure listings mainly unlock procurement budgets, not discovery.
4. **Self-serve** only for Starter (free ≤5 viewers, 14-day trial, no credit card) — it feeds the funnel and creates land-and-expand, but is never the core motion.
5. **ABM for Tier-2 displacement:** target accounts running ServiceNow or Clarity at renewal — the TCO table (Part 12) is the campaign.

PART 28 — IMPLEMENTATION PACKAGES [E]

Package	Contents	Indicative fee	Duration
Basic	Config + admin/user training (remote)	**$7,500**	1–2 weeks
Professional	Basic + data migration + 2 integrations	**$30,000**	3–5 weeks
Enterprise	Professional + SSO/SCIM/MFA + governance design + reporting setup	**$90,000**	8–12 weeks
Global Enterprise	Full transformation: multi-entity rollout, partner-delivered, bespoke connectors	**$200,000+**	3–6 months

Target: services ≈ 25–40% of first-year total contract value; margin-positive at blended delivery rates.

PART 29 — SECURITY & ENTERPRISE READINESS

Capability	Status in PMCT v3.1.0	Category
SSO SAML 2.0 / OIDC (Entra ID, Okta), JIT provisioning	**Shipped**	Existing
SCIM (RFC 7644) user/group provisioning	**Shipped**	Existing
MFA (TOTP + recovery codes, enforce-by-role)	**Shipped**	Existing
RBAC (43 permissions × 8 roles) + audit on every mutation	**Shipped**	Existing
JWT (HS256 12 h) + bcrypt + lockout	**Shipped**	Existing
Self-hosted single-tenant (Docker/bare-metal, one-file DB, backup scripts)	**Shipped**	Existing
Data residency (deploy in-country), air-gapped install	**Shipped by architecture**	Existing
Encryption in transit (TLS via nginx/Caddy)	Shipped	Existing
Encryption at rest (disk/DB-level)	Partial (OS/infra level)	**Required**
PostgreSQL migration (scale ceiling removal)	Portable schema — execution required	**Required**
Multi-tenancy + tenant isolation	Not built (documented exception E-1)	**Roadmap**
SOC 2 Type II	Not started	**Roadmap** (Y2, ~$60–120k)
ISO 27001	Not started	**Roadmap** (Y2–Y3)
GDPR/DPDP compliance program (DPA, RoPA, retention)	Architecture-compatible; formal program required	**Required**
DR/HA (multi-AZ, RPO/RTO targets)	Backup/restore scripts + docs; HA execution required	**Required**
Penetration test (external)	Not executed	**Required before enterprise push**
Secrets management, vulnerability management, SAST/SCA in CI	Partial (deps pinned; formal pipeline required)	**Required**

Honest gate: **no SOC 2, no pen-test report, no formal a11y audit yet** — budget and sequence them in the roadmap below; do not sell Enterprise into US/EU banks before SOC 2 exists.

PART 30 — PRODUCT ROADMAP (commercially sequenced)

Phase	Theme	Features	Business value	Target buyer	Success criteria
Done (v1–v3.1)	Platform + Command Center + PPT export	46 domains, engines, 177 reports, integrations, integrity layer	The sellable product	Mid-market PMO	Golden path 20/20; production-certified ✓
Phase A (0–3 mo)	**Sales readiness**	Jira two-way live connector GA, SAP/Oracle-finance read connector, pen test, SOC 2 kickoff, pricing page, demo dataset	Removes top 3 sales objections	First 20 customers	2 connectors demo-able in <1 day
Phase B (3–9 mo)	**Layer proof**	SAP + HR + Finance connectors, Teams/Slack distribution of the tower, PostgreSQL, SOC 2 Type I→II	Earns the "layer" claim technically	100–500-user deals	50% of new deals with ≥2 live connectors
Phase C (9–18 mo)	**Enterprise readiness**	Multi-tenancy (E-1), native mobile, scale execution (E-2), ISO 27001 start, a11y audit (E-8)	Unlocks 5,000+ user and SaaS-only buyers	Large enterprise, partners	1 global-enterprise deployment
Phase D (18–36 mo)	**AI PMO + industry templates**	Generative status narratives (governed), meeting assistant, portfolio scenario AI, industry templates on metadata layer (E-7)	ARPU expansion; defense against incumbents	Installed base	NRR ≥ 115%

PART 31 — SWOT

Strengths (current): breadth already shipped (46 domains; CPM/EVM/Monte Carlo; 177 reports; PPT export); integrity/auditability as architecture, not add-on; self-hosted option; lean cost base; the layer thesis with connectors and honest status discipline. **Potential strengths:** financial-intelligence depth vs Tier 1; price/performance vs Tier 2; India/Gulf wedge with DPDP/sovereignty demand. **Weaknesses (current):** no brand/trust signals; no SOC 2/ISO/pen-test; single-tenant SQLite scale ceiling; no native mobile; small team = delivery capacity risk; features outpaced by incumbent marketing spend. **Opportunities:** mid-market gap between $25 and $60/user; glue-layer consolidation spend; DPDP/sovereignty-driven deployments; partner channel; Atlassian/ServiceNow pricing pressure pushing buyers to look. **Threats:** Atlassian/ServiceNow extending upward into their estates; Planview moving down-market; AI dashboards commoditizing "insight"; buyer inertia ("Jira is fine"); a two-person sales motion missing quarters.

PART 32 — COMPETITIVE MOAT

Candidate	Real moat?	Why
Aggregated cross-system data model	**Yes — strongest**	Compounds with every connector and customer; incumbents' data is walled
Integration ecosystem (27 connectors, webhooks, honest status)	**Yes**	Time and trust to replicate; grows with Phase B
Evidence/freshness/governance chain (SHA-256, audit, gates)	**Yes**	Rare, hard to retrofit, decisive in regulated sales
Financial engine (EVM/NPV/IRR computed live)	Partial	Replicable math; moat only when fed by live delivery data
Metadata-driven configuration	Partial	Adoption lock-in grows with configured fields/terminology
Workflow/automation engine	Weak alone	Table stakes
Reporting library (177)	Weak alone	Copiable; matters in aggregate UX
AI layer	Emerging	Governance-gated AI is differentiating in regulated buyers; raw models are not
Switching costs	**Yes (over time)**	Configured metadata + connectors + historical evidence = rising exit cost
Brand/trust	**To build**	The honest gap — SOC 2 + reference logos are the moat purchase

Easily replicated by incumbents: individual features, dashboards, AI summaries, Gantt. Not easily replicated: **the layer position itself** — it would require them to cooperate with competitors' systems of record, against their commercial interest.

PART 33 — KEY RISKS & MITIGATIONS

Risk	Severity	Mitigation
Incumbents extend upward (Atlassian/ServiceNow)	High	Stay the neutral layer; integrate deeply with them (co-option beats confrontation); win on neutrality + self-hosted
No certifications blocks enterprise pipeline	High	Phase A/B security budget ($100–200k); don't chase certifications before pipeline justifies
SQLite scale ceiling exposed in deal	Medium	PostgreSQL migration in Phase B; be honest per E-2
Sales capacity (founder-led ceiling)	High	Hire 2 enterprise AEs at first $30k MRR; partner channel Phase B
Long enterprise cycles starve cash	High	Land SMB/mid for cash flow; services revenue; perpetual lane
Feature-copying by ClickUp/monday	Medium	Compete on depth + governance, not features; publish integrity moat
AI expectations exceed governed scope	Medium	Sell the governance as the answer, not the gap
Data migration failures damage trust	Medium	Governed dry-run import (already shipped); migration rehearsals
Key-person dependency	High	Documentation suite (ships today), hiring plan, escrow for perpetual deals
Currency/FX (INR pricing)	Low	Price in USD; INR indicative

PART 34 — MANAGEMENT KPI DASHBOARD

Category	KPIs
Product	MAU/seat ≥ 60%; exception-feed adoption; connectors live per customer (target ≥2); reports auto-generated per month; time-to-first-board-pack < 1 week
SaaS	MRR, ARR, ARPU, GRR ≥ 85%, NRR ≥ 105%, churn ≤ 12%, GM ≥ 85%, LTV:CAC ≥ 3 (loaded CAC)
Sales	Pipeline coverage ≥ 3x; demo→pilot ≥ 40%; pilot→paid ≥ 60%; win rate ≥ 25% (mid-market); cycle ≤ 8 weeks mid / ≤ 2 quarters ent; ACV by tier
Customer	NPS ≥ 40; time-to-value ≤ 30 days; support tickets/customer ≤ 1/mo; logo retention ≥ 88%
Financial	Revenue vs plan; burn multiple ≤ 2; runway ≥ 18 mo; EBITDA trajectory (Part 24)

PART 35 — INVESTOR / MANAGEMENT SUMMARY

- **What:** PMCT is the Enterprise Project & Portfolio Control Tower — the layer above Jira, ServiceNow, SAP, HR and Finance that gives CEO/CFO/CTO/PMO computed, auditable, real-time portfolio intelligence.
- **Problem:** leadership steers portfolios on hand-built, stale, unaudited summaries; the glue layer costs more than the tools it stitches.
- **Buyer:** PMO Director champions; CFO/CIO approve; mid-market and upper-mid enterprise (100–5,000 staff) first.
- **Why they pay:** consolidation of glue spend (3–5x PMCT's price), decision speed, audit evidence, data residency — value-based pricing between work management and enterprise PPM.
- **Market:** PPM software $6.8–9.8B (2026) growing 10–13% CAGR to $10–18B by 2030–31 [V].
- **Competition:** Tier-1 tools can't leave their walls; Tier-2 suites cost 5–15x and take quarters to deploy; Tier-3 hybrids lack depth.
- **Differentiation verdict: SUFFICIENT** (mid-market/upper-mid) on the combination: portfolio optimization + financial intelligence + governance + executive reporting + integrations + self-hosted + integrity chain. **PARTIAL** for global enterprise until certifications/scale.
- **Pricing:** $9/15/21/29 per user tiers + platform ≥$75k/yr + perpetual $75k–900k; AI and SSO included where competitors charge extra.
- **Year 1 (base planning scenario):** 35 customers, ~2,540 paid users, $463k exit ARR, $481k revenue; conservative $57k; aggressive $1.37M. **No guarantees — planning scenarios.**
- **Investment required:** ~$0.6–0.8M cumulative cash to break-even (base), concentrated in engineering + security certifications + 2 sales hires.
- **Biggest risks:** incumbent response, certification gate, sales capacity.
- **Next 90 days:** GA the Jira live connector; run 10 paid pilots; publish pricing; start SOC 2 + pen test; close first 5 reference logos.

PART 36 — FINAL RECOMMENDATION

1. **Product strategy:** sell what ships (v3.1.0), and spend the next two quarters on the three things sales needs: live Jira connector GA, SAP/Finance read connectors, and security certification. Everything else waits.
2. **Pricing: $9 / $15 / $21 / $29 per user/month (annual)** for Starter/Professional/ Business/Enterprise; platform fee from $75k/yr above 500 users; AI and SSO always included. Annual-prepay 25% discount. Do not discount below Professional for the mid-market — the price point is the positioning.
3. **Enterprise strategy:** platform deals **$75k–250k/yr** (2,000-user ceiling until Phase C), 3-year prepay discount 10–15%, implementation bundled.
4. **Perpetual license: $75k–900k one-time** by size class + 18–20% maintenance; reserved for sovereignty/regulated buyers; ≤20% of bookings.
5. **Implementation: $7.5k / $30k / $90k / $200k+** packages; target 25–40% of first-year TCV; partner-delivered at the top end.
6. **Support:** included business-hours; **$8–12%/yr premium support** for subscription; maintenance carries it for perpetual.
7. **Go-to-market:** founder-led direct sales to PMO Directors in India + Gulf first (100–500 delivery staff, Jira estates, residency-sensitive), paid pilots as the standard wedge, partner channel from month 6.
8. **Year 1 targets:** Conservative — 12 customers / $57k revenue (validate); Base — 35 customers / $481k revenue / $463k exit ARR (plan); Aggressive — 56 customers / $1.37M revenue incl. 2 platform deals (stretch). **These are planning scenarios, not commitments.** The conservative scenario is not viable as-is: if pipeline lags base by month 6, cut costs and move up-market rather than burning through the cash plan.

The one-sentence commercial thesis: organizations already pay 3–5x PMCT's price for the broken glue layer between their project tools and their executives — PMCT replaces that glue with a governed, self-hostable control tower, priced as the layer it is.

TABLE INDEX (as required)

T1 Capability map (Part 3) · T2 20-competitor comparison (Part 6) · T3 Feature matrix (Part 7) · T4 2026 pricing comparison (Part 10) · T5–T11 organization costs 25/50/100/250/500/1,000/5,000 (Part 11) · T12 recommended pricing (Part 14) · T13 SaaS revenue model (Part 18) · T14–T16 12-month scenarios (Part 18) · T17 SaaS vs perpetual (Part 21) · T18 3-year model (Part 24) · T19 break-even (Part 23) · T20 enterprise deals (Part 16) · T21 category & tier map (Part 6, Tier column + layer-test column) · T22 coexistence vs replacement (Parts 8/16 — verdict: coexistence-first; replacement triggers: multi-entity consolidation, ServiceNow renewal events, CFO mandate) · T23 differentiation scorecard (Part 8).

SOURCES (market & pricing claims)

- Atlassian/Jira pricing — atlassian.com (Standard $7.91, Premium $14.54; Enterprise from ~$166k/yr) [V]
- ClickUp — clickup.com/pricing (Unlimited $7, Business $12; AI add-ons $9–28) [V]
- Trello — trello.com (Standard $5, Premium $10, Enterprise $17.50) [V]
